

Dean St. Studios

DEAN ST. Studio 2

Originally a large and high-ceilinged space for drum tracking, the modern studio construction takes full advantage of the preceding room's acoustics to offer Dean St's most characterful live space; all this attached to an intimate and warm-sounding control room – featuring the engineer's choice of either Pro

Tools HDX rig, or 24 input UAD system. The studio is packed with industry-standard outboard and backline choices, ideal for seamless production sessions, writing, and vocal tracking – with the scope afforded by the characterful booth for guitar or even solo string overdubs.
